

## CMP PRODUCTS COMPANY PROFILE

CMP Products is a division of British Engines Limited, a company registered in England, number 167542.

British Engines Limited was founded in St. Peters, Newcastle upon Tyne in 1922, when two brothers from Glasgow, Harold and Charles Lamb established the Company. Today the Company proudly remains in the same family ownership with Mr. Alex Lamb its present chairman, the grandson of one of the founders.

The early British Engines Limited business was conducted from a building suitable for housing less than 12 employees, with marine engineering and sub-contract machining work being at the core of its activities.

The Company had entered the marine engineering market when it began servicing, overhauling and reconditioning diesel engines for marine vessels. British Engines' development relied largely upon the success of its customers, as it did not originally offer any of its own products, and business was increasingly subject to sporadic fluctuation.

Having identified that it was not in control of its own destiny, British Engines consequently decided to employ a product development strategy, and embark on a path of diversification and significant business growth.

In 1957, cable terminating glands were introduced by British Engines Limited and marketed under the CMP brand. CMP Products has for over 60 years cemented an international reputation for quality and reliability in various sectors of industry including oil & gas, petrochemical, pharmaceutical, power generation and distribution, mining and transportation infrastructure.

Many of the company's innovative developments incorporate unique features and benefits which have evolved directly from customer needs. This is just one of the reasons why CMP is highly regarded as the specialist in the design and manufacture of cable glands, cable cleats and associated accessories.

CMP Products are a quality assured company responsible for their own design and which operates a Quality Management System (QMS) complying with the requirements of BS EN ISO 9001:2015. CMP's manufacturing base is ideally situated in the north east of England, with excellent logistical access to mainland Europe via major rail, road, sea and airports nearby. This enables CMP to provide an excellent delivery service to customers no matter which part of the world they are in.

The company currently has regional offices in: Houston, Singapore, Dubai, Pusan, Shanghai, Moscow, Johannesburg, Perth and Brisbane to support key global markets. These offices provide additional back-up to our global network of established agents and distributors who represent CMP in all of the major countries of the world.

Following a sustained period of sales growth, CMP now employs more than 400 people globally; whilst occupying two factory units housing manufacturing, assembly, distribution and office support.

In the offshore and onshore oil and Gas sector, CMP has enjoyed considerable success in recent years, during a period of changing standards, both in respect of improved safety and higher quality expectations.

With the wealth of experience which CMP undoubtedly possesses, we strongly believe that the company can offer a package embracing not only competitive price and delivery but also a commitment to product quality and reliability which will serve you well, both today and in the years ahead. Quite simply the after sales service offered by CMP is second to none.
